

Resturant app

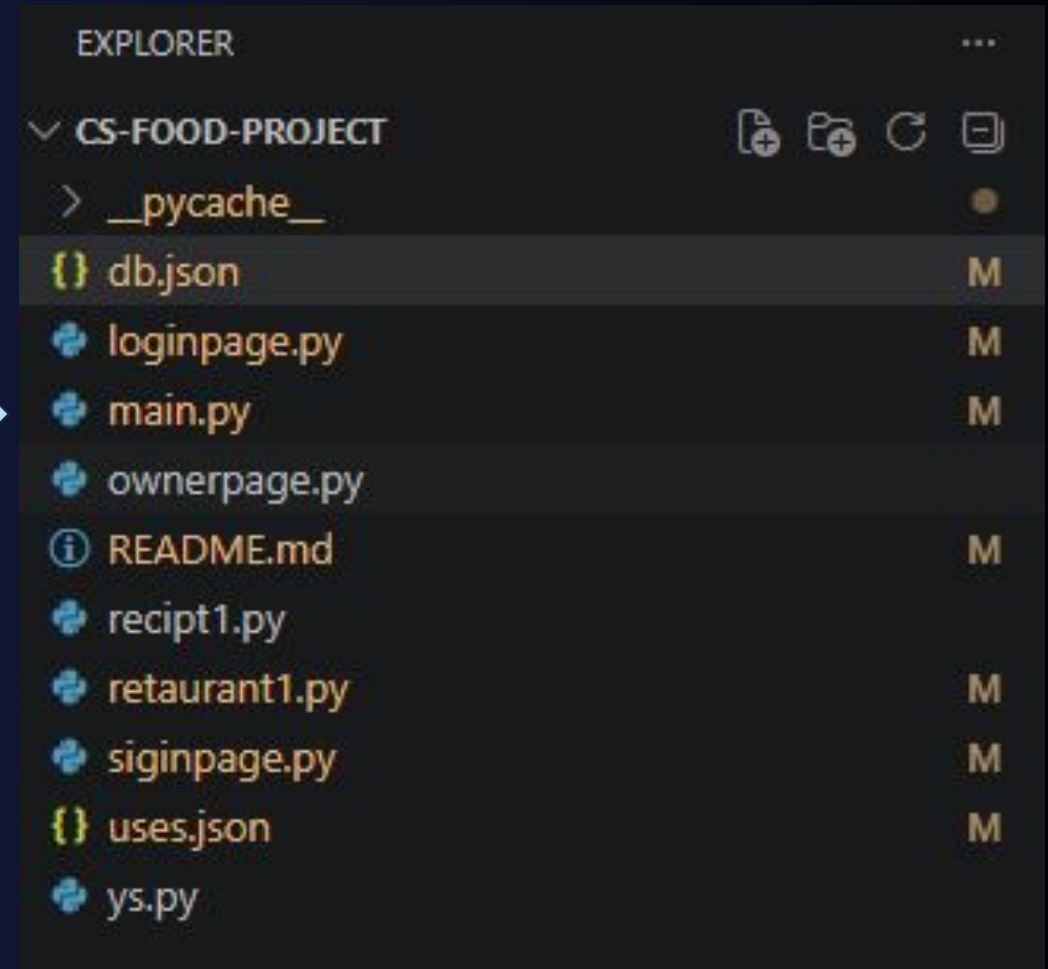

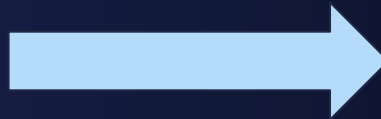

By Mahmoud, Hassen, Youssef

Note: this not our presentation but just showing how the app work for and the ppt only for the professor for app info not a presentation!! thanks :).

How to run the app

To run the app you need to run the main file because it contain the main root, and because all the other file are import to it in other word it is the mother.

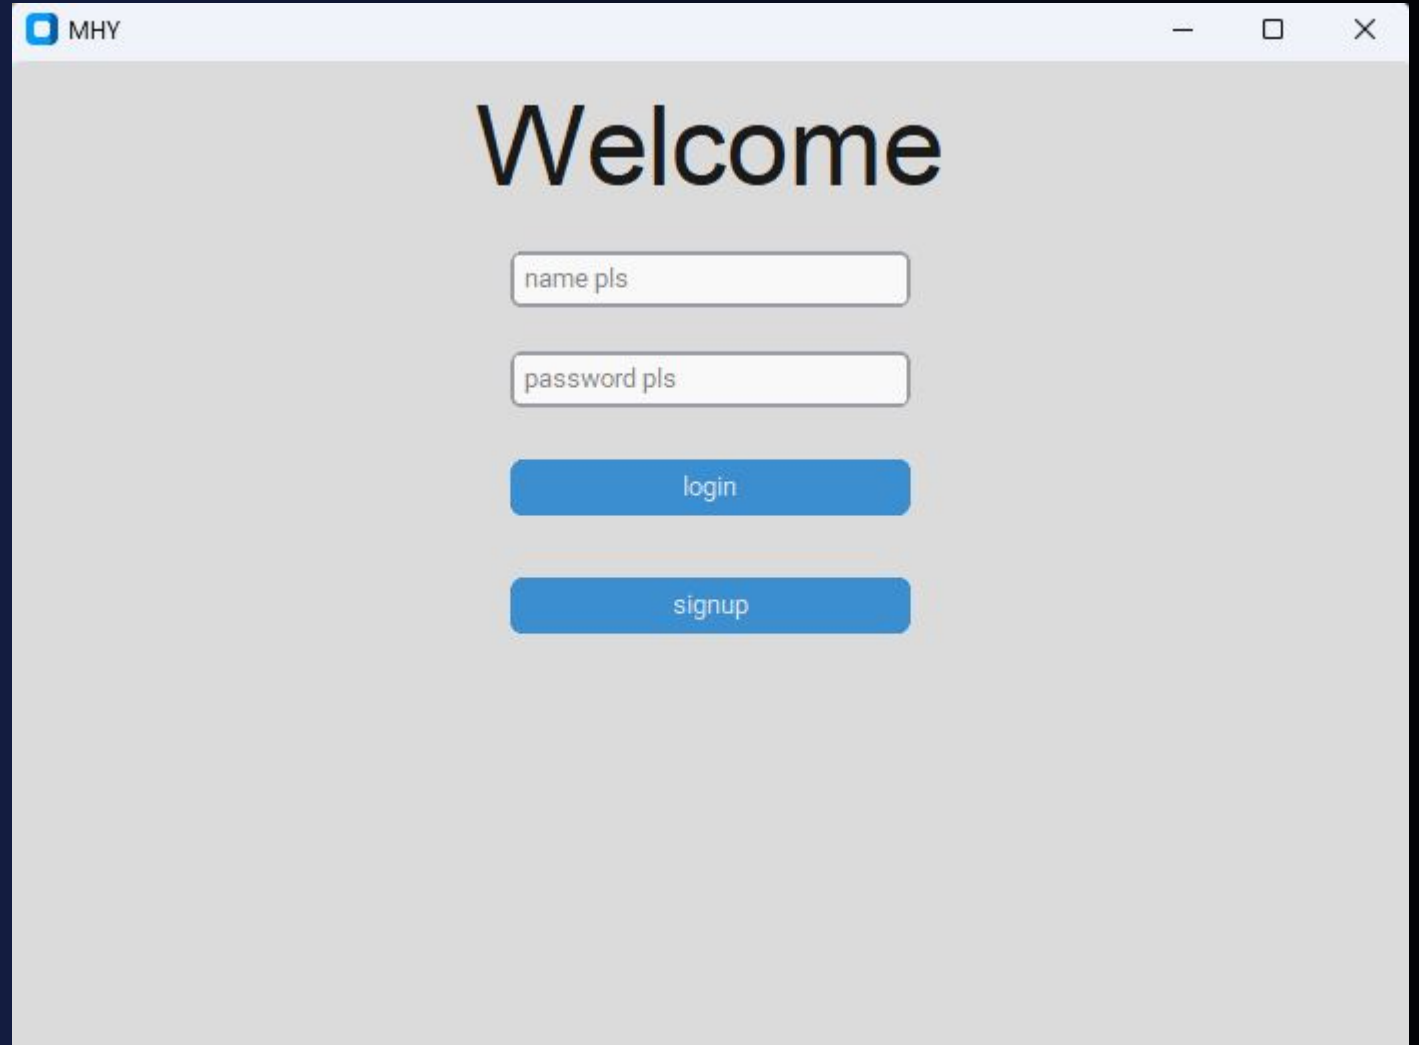

The welcome page:

The welcome page code you can find it inside the [login.py](#) file

- You can use one the customer name and password that is given in uses.json and press the login button the owner part will be empty.
- if you wanna create a new account owner or customer please enter signup

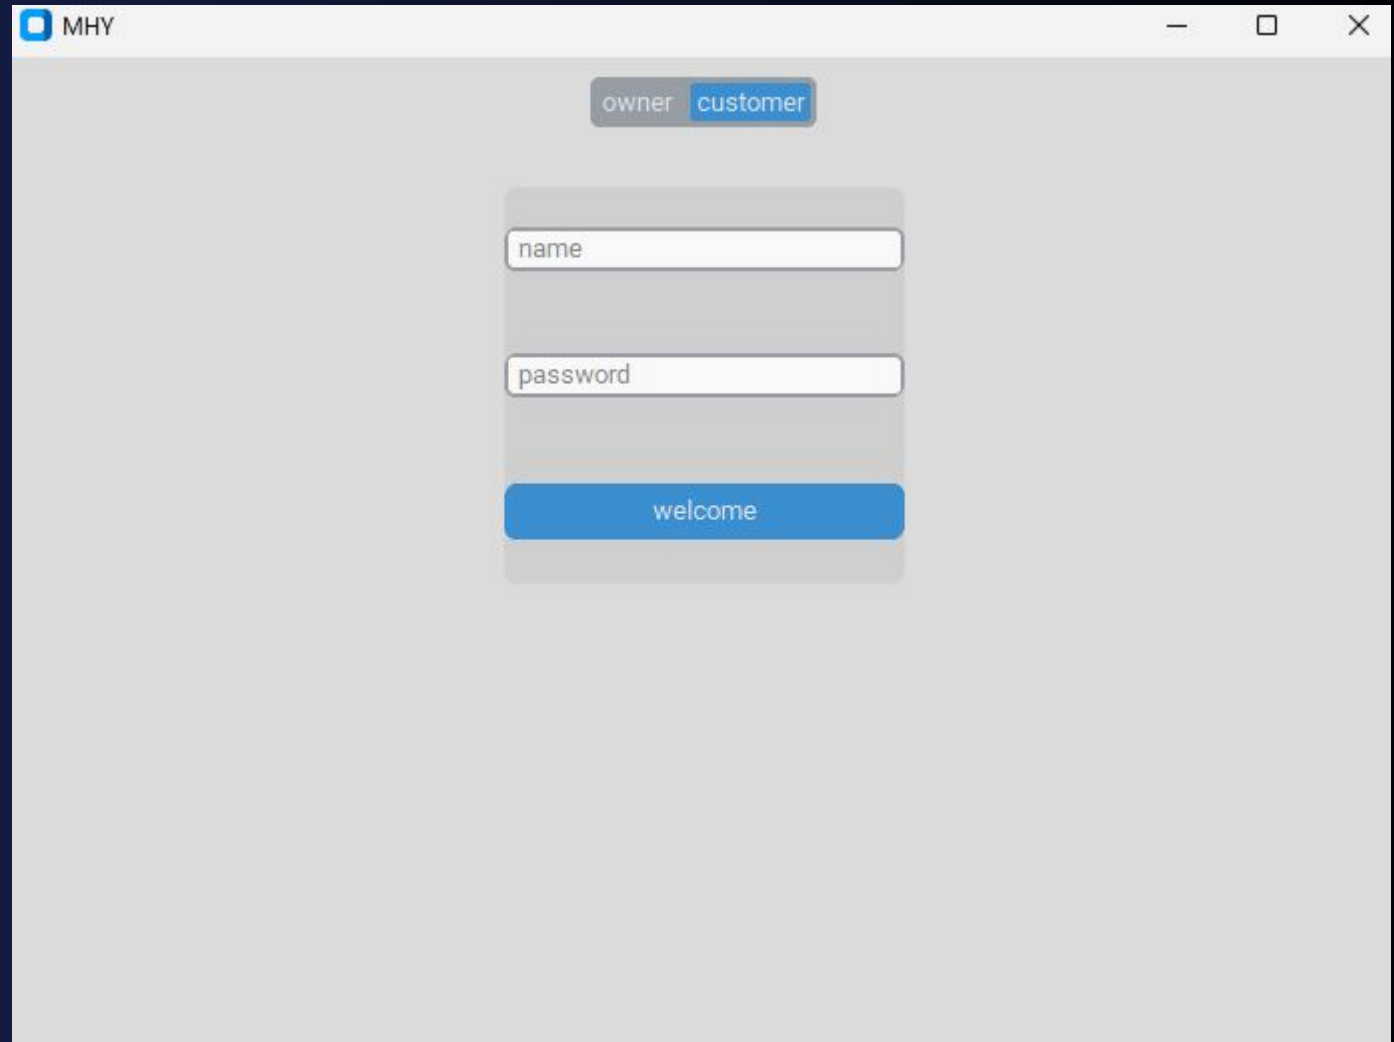

Note: we add a feature if you want to close the app press the esc button on keyboard.:)

The screenshot shows a web application window titled 'MHY'. The main heading is 'Welcome'. Below the heading, there are two input fields: 'name pls' and 'password pls'. Under the 'name pls' field, there is a light blue dashed rectangular box. Below the input fields, there are two blue buttons: 'login' and 'signup'.

The signup page:

- Here you just put your name and the password you want to create and then press welcome
- If you want to make owner account just click on owner and then same as the customer pls enter name and password

The screenshot shows a web application window titled "MHY". At the top, there are two buttons: "owner" and "customer", with "customer" being the active selection. Below these buttons is a form with two input fields: "name" and "password". At the bottom of the form is a blue button labeled "welcome".

The owner page:

- **Restaurant Name:**
 - if your coming from the signup page than just enter your new restaurant name and want to change it type the new name and that click save name both for creating and changing.
 - if you came from login please enter your restaurant name and click save name to be able to see you menu note(it name it wrong no worry the code know you it will just change the restaurant name you just need to rename it) also pls don't click on save name while it is " empty" because in that case it will build new restaurant because of the if condition you will get what i mean when you look at [restaurant1.py](#) the restaurant name class.

The screenshot shows a web application window titled 'MHY'. The page has a light gray background. At the top, there's a header with the 'MHY' logo and window control buttons. The main content area is divided into sections. The first section is titled 'Restaurant Name:' and contains a text input field with the placeholder 'Enter restaurant name' and a blue 'Save Name' button below it. A horizontal line separates this from the next section, 'Add or Edit Food:', which contains two text input fields: 'Food Name (e.g. Burger)' and 'Price (e.g. 15.99)', followed by a blue 'Save Food to Menu' button. Below this is a section titled 'Current Menu' which contains a large, empty gray rectangular area with a vertical scrollbar on the right side.

The owner page:

- Add or edit food:
 - you enter the name of the food and its price at each bar note price should be float because we will need it for calculation later, and then click the save food to menu button.
 - if you want delete the food click trash and it will do the job
 - if you want to change price just put the price that you want in the **price par** and press change price for the food you want to change and it's done.
- that it for the owner part :)

Restaurant Name:

qw

Save Name

Add or Edit Food:

Food Name (e.g. Burger)

Save Food to Menu

Current Menu

koshary Price 12.01\$	change price	trash
foodname Price 123.0\$	change price	trash

Customer part:

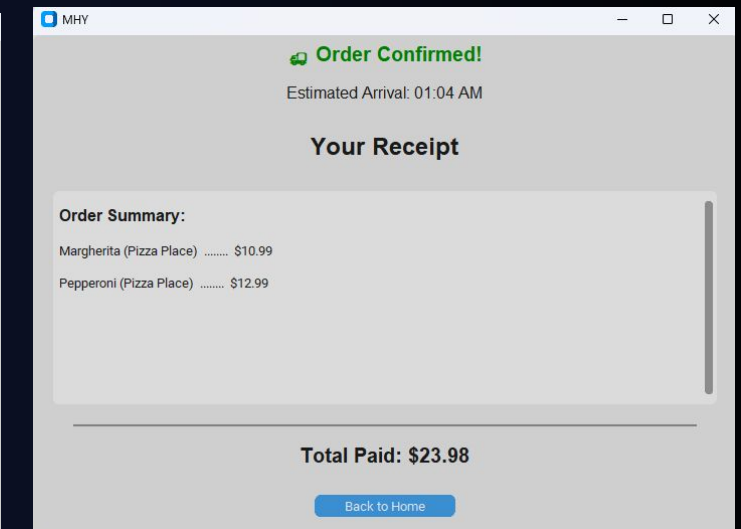

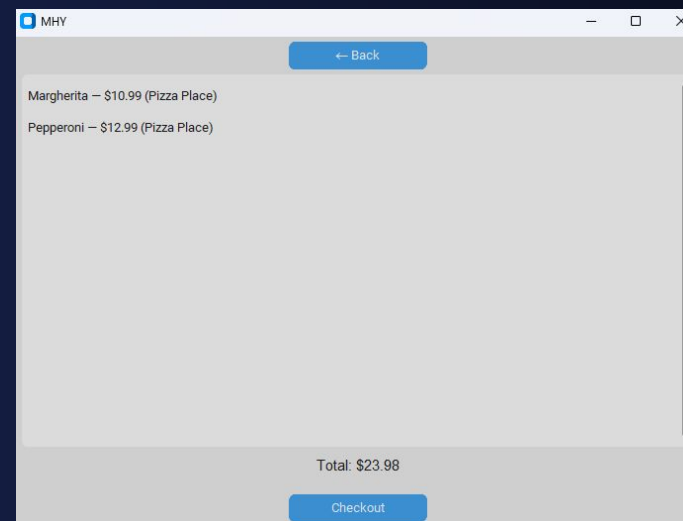

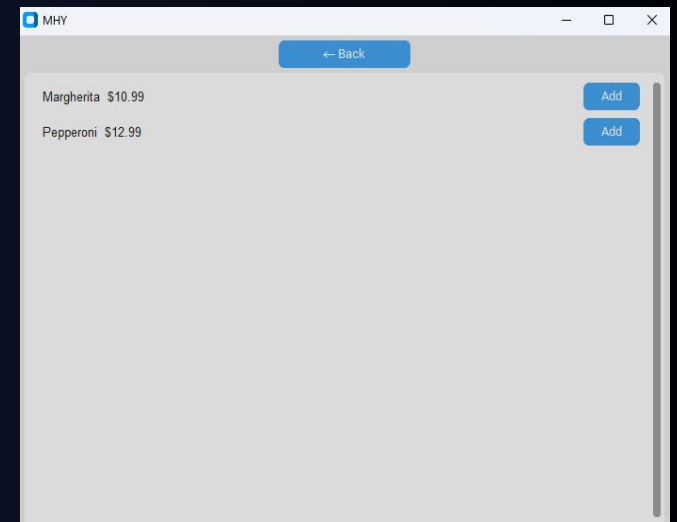

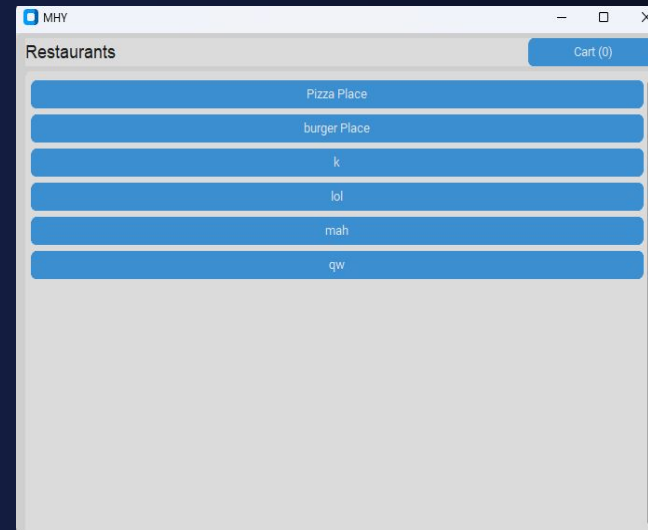

- here where you enjoy your time just select the restaurant you want.

- click add on the food that the restaurant offer and click add go back

-press on cart ones you go back

Cart (2)

- You can go back to add or do checkout where the recip be given

**Thank you very much professor
for your time and efforts**

**We would like your feedback so we can
improve the app as fast as possible
before the presentation date**

Our app represent: be simple
